

THE SENECA WIRE & MANUFACTURING COMPANY

For over 100 years, The Seneca Wire & Manufacturing Company has followed one principle "Keep the needs of our customers first." We will remain committed to this simple principle for the next 100 years.

We are proud of our culture to service our customer through thick and thin. We have been rewarded with some of the strongest customer relationships in our industry. We cannot and do not take these relationships for granted, especially in today's business environment. We have to earn your business every day, with every order, assuring the best quality, product performance and service available. The reward for going the extra mile for our customer is a sustained future for our company and our employees.

Regardless of our producing location, Keystone-Seneca Wire Cloth Company - aluminum wire and wire cloth manufacturing, Seneca Wire, Fostoria or FĒNIX, LLC - cold drawn spring wire and tempered spring wire manufacturing, our commitment to our customer remains our first priority.

At our new manufacturing facility, FĒNIX, LLC, we started with our customer's needs in mind when we engineered and installed the most modern cold drawing and tempered wire capability in the world. We applied our extensive process knowledge and experience in the production of tempered wire using technological advances in equipment to meet the needs of our customer. Being the oldest, the largest and now the most modern tempered wire producer shows our commitment to our customers and our future in tempered spring wire.

We make a relentless effort to be the easiest company for our customers to do business with. Our Total Quality Commitment to put our customer first should be expected with every order every day.

Sincerely,

Steve Wray
President
